

SIFTERS

Alvibra

– Your specialist in vibration technology

HIGH END Sanitary Sifters for the food, dairy and chemical industry

The Alvibra® sifters are primarily used in the dairy industry with high demands for stable operation, cleanability, high screening quality, easy operation and maintenance.

Gaskets are incorporated in the easy-openable and gas-spring supported lids. Gaskets are thereby not in the way with far less risk of being damaged when operators work around the machine.

All Alvibra® sifters are prepared for later installation of continuous cleaning **BallDeck™**.

Instead of using traditional vibration motors, any Alvibra® sifter can also be delivered with the silent and smooth operating **VibraDrive™** system, which offers a lot of great advantages – hereunder immediate start & stop sequences without uncontrolled sideways movements.
